(54) Video games

(57) A video game cabinet comprises a video screen 1, a control panel 2 and a coin-operated mechanism 4 mounted on a hinged door 5 above a cash-box compartment 6. A game board and/or game system is mounted on a support board 9 which is readily slidable into and out of the cabinet along slides 10 and 11 through an opening in the front panel 3 of the cabinet which is normally closed by a door 8. This arrangement facilitates alteration or exchange of the game board and/or game system without it being necessary to modify the construction of the cabinet.
